Urban Frontiers

Future fields of research in city-planning

Obviously, something is seriously wrong in city planning theory + practice, because we are not achieving real results—this applies in N.S.W. probably more than any where else in the world.

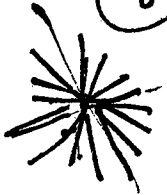

New approaches, reappraisals of the purposes, the character, the role, the techniques of city planning, are necessary.

Research frontiers — ~~XXXXXXXXXXXXXXXXXXXX~~

~~XXXXXXXXXXXX~~ Some are still frontiers, even in the U.S.A. + Europe, while other things we ought to be thinking about here are already adopted overseas.

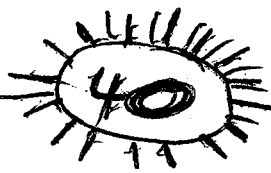

- ① a pattern & a process for urban renewal
- ② urban design at the city scale based on perception research.
- ③ Capital budgets for allocation of social priorities

- ④ Economic analysis of urban areas
input-output — economic base theories.
- ⑤ Community power structure analysis
+ power structure harnessing.
- ⑥ Planning as a live political process.
- ⑦ Justification for lots of money for
planning work, enabling proper
attention to detail by larger staffs.
- ⑧ Full time education 2 years.

- ⑨ Training in logic — theory
of planning.
